STORY 01 40-SECOND LOAD TIME

Site Loads. Leads Leave.

40.1 seconds to load on desktop. Speed Index 8.1s. Google penalizes slow sites. Visitors bounce before your offer loads. Dead on arrival.

-35%

A third of your traffic leaves before seeing your pitch.

300 visitors × 35% bounce = 105 lost × 20% conv × 30% close × \$1,200 = \$7,560 gone.

WHAT'S HAPPENING

Your site scores 47/100 on performance with a 40-second full load — top competitors load in under 3 seconds.

Every second over 3 costs you 7% of conversions. You're not competing; you're invisible.

HOW TO FIX IT

- 01

Compress & Cache

Run site through PageSpeed Insights, compress all images, enable browser caching and a CDN like Cloudflare.
- 02

Audit Render-Blocking Scripts

Remove or defer any third-party scripts (chat widgets, trackers) that block page render above the fold.

WHAT YOU'LL GET

Sub-3s load time recovers 20–30% of bounced visitors instantly.

Time: 6h · Difficulty: Medium

STORY 02 NOT MOBILE-FRIENDLY

Mobile Users. Broken Experience.

60%+ of local searches happen on phones. Your site isn't mobile-friendly. That's the majority of your traffic hitting a broken layout and leaving.

-25%

Half your audience can't use your site on their phone.

180 mobile visitors × 25% lost × 20% conv × 30% close × \$1,200 = \$3,240/mo missed.

WHAT'S HAPPENING

Google's mobile-first index means a non-mobile-friendly site ranks lower for everyone — not just phone users.

Visitors on phones see misaligned text, broken CTAs, and no easy tap-to-call. They bounce to a competitor.

HOW TO FIX IT

- 01

Responsive Audit

Use Google's Mobile-Friendly Test tool to identify every broken element and fix layout with responsive CSS.
- 02

Add Tap-to-Call Button

Place a sticky tap-to-call button at the bottom of every mobile page — reduces friction to zero.

WHAT YOU'LL GET

Mobile-friendly status boosts rankings and converts phone visitors into calls.

Time: 8h · Difficulty: Medium

GBP Sends Traffic Wrong.

Your Google Business Profile links to a UTM-tagged subdirectory URL, not your main site. Splits authority, confuses crawlers, leaks ranking power silently.

-15%

Your GBP link dilutes your SEO instead of amplifying it.

15% organic rank drop × 300 visitors = 45 fewer visitors × 20% conv × 30% close × \$1,200 = \$3,240/mo.

WHAT'S HAPPENING

The GBP website URL points to a UTM-parameterized subdirectory instead of your canonical homepage — splitting link equity.

Google sees two URLs for the same business. That confusion costs you ranking positions for 'insulation Fort Lauderdale.'

HOW TO FIX IT

- 01

Fix GBP Website URL

Update Google Business Profile website field to your clean canonical homepage URL — no UTM parameters.
- 02

Set Canonical Tags

Add canonical tags on the Fort Lauderdale subdirectory page pointing to the main domain to consolidate authority.

WHAT YOU'LL GET

Consolidated ranking signals push you higher in local pack results.

Time: 30min · Difficulty: Easy

STORY 04 NO URGENCY OR OFFER ABOVE FOLD

Good Reviews. Weak Hook.

640 five-star reviews and no headline offer above the fold. Visitors have no reason to call NOW. No urgency. No promo. No hook. Just a slow page.

-20%**Visitors admire your reviews but leave without booking.**

300 visitors × 20% uplift missed × 20% conv × 30% close × \$1,200 = \$4,320/mo left on table.

WHAT'S HAPPENING

Your social proof is exceptional — 4.9 stars, 640 reviews — but it's buried or generic on the homepage.

A single bold offer ('Free attic assessment this week') above the fold would convert browsers into booked jobs.

HOW TO FIX IT**01 Add a Time-Limited Offer**

Write one bold headline offer above the fold: free assessment, price lock, or seasonal deal with an expiry date.

02 Surface Review Count in Hero

Place '640 Five-Star Reviews' with star icons directly in the hero section — next to your CTA button.

WHAT YOU'LL GET

Urgency plus proof in the hero section lifts conversion rate 15–25%.

Time: 2h · Difficulty: Easy

STORY 05 REVIEWS NOT ON WEBSITE

Stars Exist. Site Hides Them.

640 glowing Google reviews. None displayed on-site. Visitors who skip Google never see your proof. Competitors with fewer reviews show more — and win the call.

-10%

Off-site reviews don't close on-site visitors.

10% conv lift × 300 visitors × 20% conv × 30% close × \$1,200 = \$2,160/mo recoverable.

WHAT'S HAPPENING

Trust is the final objection before a visitor calls. Reviews on-site eliminate that objection without any extra ad spend.

A simple review widget or curated testimonial section converts undecided visitors who never check Google independently.

HOW TO FIX IT

- 01

Embed Google Review Widget

Install a Google Reviews widget (Elfsight or similar) on the homepage and service pages to show live star ratings.
- 02

Add 3 Named Testimonials

Pull three detailed reviews (like Jeremiah's) into a dedicated testimonial section with photos and star ratings.

WHAT YOU'LL GET

On-site social proof closes fence-sitters and reduces cost-per-lead without extra ad spend.

Time: 3h · Difficulty: Easy

TIME TO STOP THE BLEEDING.

You have a 4.9-star reputation and a broken website bleeding \$5K–\$12K/month. That's fixable in a week. Book a free call and we'll show you exactly which fix moves the needle first.
